

HIWAY

Global innovation
leaders in sustainable
pavement solutions.

SPECIALISING IN RENEWABLES

As the global leader in sustainable pavement solutions, HIWAY brings nearly four decades of scientific research and technical expertise to every renewables project.

Through in-situ recycling, reuse and enhancements of existing materials, HIWAY delivers pavement solutions with improved strength and durability. Specialising in difficult locations with complicated terrain and soils, while substantially reducing emissions, results in extracting less from the environment and at the same time minimising disruption and cost.

With an ongoing commitment to innovation and sustainability, our team continues to redefine the renewables industry delivering in consultation with clients a more balanced, sustainable and carbon conscious solution.

Our communities deserve it. Our environment depends on it.

HIWAY. Where innovation meets sustainability

At HIWAY we're committed to delivering innovative and sustainable pavement solutions for all clients, across a broad range of projects in the renewables sector. From wind and solar farms, pumped hydro, transmission systems and hydrogen our team of experts are passionate about delivering high quality, resilient, cost effective results.

Reduce carbon emissions

Optimise time efficiencies

Maximise pavement recycling

Minimise reliance on new virgin materials

From the beginning, HIWAY's approach has been a collaborative one. For decades we have worked as a team, in consultation with clients, where decades of experience, research and data-driven evidence deliver the best possible outcomes.

As a leader of sustainable pavement solutions both in Australia and New Zealand, and the second largest globally, it is really HIWAY's enviable track record and industry reputation that best demonstrates our commitment to innovation and performance within the renewables sector.

Leading the way in renewables

The team at HIWAY understand the unique complexities of a renewable energy project.

Combining extensive experience with market leading research and technology, our team deliver high quality, sustainable solutions with significant time and cost saving benefits compared to traditional methods.

Our purpose-built fleet and proven methodologies enable us to navigate challenging and steep terrain with gradients exceeding 20% as well as addressing simultaneous and often complex geological issues.

HIWAY has an extensive portfolio of successfully delivered projects across Australasia. As the contractor of choice for global developers in the region, we are leaders committed from concept to completion, to delivering technical and operational excellence. HIWAY's renewable energy projects are built to withstand the rigours of both the environment and heavy machine use, ensuring all components are high performing, cost effective and safety assured as well as aligning with our commitment to sustainability.

Experienced in driving change

From site access and road infrastructure to crane pads and laydown areas, HIWAY has delivered high quality sustainable solutions on some of Australia and New Zealand's most complicated renewable sites.

HIWAY has extensive experience with wind farm development, delivering innovative solutions that negate the various complicated geological and wind issues typical to these sites.

Our team of experts understands the safe and timely delivery of all OSOM (over size over mass) components is of paramount consideration providing high quality infrastructure such as access roads, tracks between turbines, hardstands as well as the upgrading of local roads for effective logistics operations.

Other renewable projects such as solar farms, BESS, pumped hydro, transmission and hydrogen are sectors HIWAY services with access tracks, crane and building pads, as well as storage hardstands.

With nearly four decades experience, HIWAY will deliver high quality, resilient, cost effective pavement solutions while substantially reducing emissions, disruption and cost.

HIWAY

By working together, we can advance a more balanced, sustainable and carbon-conscious network for all.
